

# Definition of Gravity Relating to the Meditation

Piyush Kumar

Abstract—I have tried to define the Gravity in my own words as I experiences. From the beginning of concept of the gravity this is the most classical topic to discuss and to define in difeerent ways with several frames of references. In our discussion I have taken a common man (as I) as frame of reference to define gravity. In this discussion I have mentioned that gravity is not only the property of the Earth but it is also the property of human and things. Due to which other people attracts towards a common man and the things that have some attributes as the Earth have due to its centre where mixture of different metal exists in its crust.

Index Terms— Meditation, TEJA, Attribute, Mediator, Punching, Gravity, Dissipating.

## 1 INTRODUCTION

W have studied a lot of books, journals, researches, Wikipedia etc. everything says that Gravity is only the property of the Earth that attracts everything towards its centre. But actually it is right? I will discuss some definitions that are given by the masters of Science. First definition by the world's great Master of Science by Sir Albert Einstein, gravity is a distortion in the shape of space time and gave the General theory of Spatial Relativity in different frame of reference. Basic Physics states that if there are not external forces at work, an object will always travel in the straightest possible line. They will never meet. Newton's law of Gravitation the all world famous that we are studying, the force between two bodies is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers. In addition I have added one another definition of the Gravity that it is not the property of the Earth to attract but also the property of people and objects or things that have some special attributes either they are in reason of Gravitation of another body or not. But Gravity should be maximum when they will in the reason of Gravitation of another body. It will be completely specified in the next heading, how it is possible?

## 2 PROBLEM DEFINITION

Problem statement is that the Gravity is not only the property of the Earth but also the property of the common ma and objects or things that have some attributes. For the correct explanation of the Gravity definition I have made myself as an experimental specimen. I have made some analysis that will be discussed in the upcoming chapters. I have made the meditation as the frame of reference and its contribution in science.

## 3 EXPERIMENTAL DISCUSSION

Not ordinary but a less extraordinary; the definition of the Gravity according to me is, Gravity is a process of attraction of some or more people or different objects that have some qualities or attributes to satisfying your brain puzzles or whatever you thinking about a person, object or anything in the open world. I state that the thing or man that has its own existence in the world should possess minimum possible attributes so that he/ she/ it can attract towards himself/ herself/ itself. This is called as Gravity. It also specifies that you have something special in yourself that is quite different from others and make you different either in single dimension (Attribute). That's why the group of people attracting towards you. Gravity shows your presence everywhere in the people's mind whether you are physically present or not. That is the utmost stage of the life that you are at the peak of Gravity (if you not died).

### 3.1 PRACTICAL EXAMINATION ON MYSELF

I have gone for meditation for some time, when my eyes are closed and I am free from the all troubles of the world and concentrating only in God. I feel that some waves are start to emit from the body and going the body too hot. It is due to the collision of electrons that are start to collide with each other and dissipating a lot of heat to the environment. According to me that these waves are magnetic lines because we all human possess some quantity of current and it is less than 10 mill amperes. I feel too hot at

many points of that body and something punching like needle. These points of punching are those where the collision of electrons are taking place. We have also studied in several scriptures the more people attract towards that an uncommon man who is in meditation because a word or a property of Mediator is **TEJA**, which is the collection of magnetic waves which are attracting to the people.

**Another description** to proof my statement is as: -

Suppose you are the point of attraction as you have some special and spatial qualities, people are waiting to welcome you, when you will be there. At that time people will certainly talking about your qualities. When you reach there, people's eagerness increasingly dominating towards and sensational and magnetic waves will be in the contact region between you and people.

#### 4 CONCLUSION

In reference of my practical discussion Gravity is not only the property of the Earth but also the property of an object or an extraordinary person that attracts the people towards himself/ herself/ it. Focusing on the result the most important fact that human will attract towards the things or objects and human, **but the objects will not attract towards the objects**. I ensure that the definition Gravity by me will proof when you will do the experiment as same.
