1π0: Theory of Everything

Neehar Sanadhaya

Abstract—In the present scenario of universe, every scientists and human is trying to find the answer of the existence of universe and itself. Till date none of the theories were able to explain the universe and its dimensions exactly. There is also contradiction among existence of religion, science, history, role of human or behavior of universe and human brain. My theory with mathematical proofs and equations is a step to provide and conclude the knowledge that solves all these contradictions. Below is provided the exact detailed explanation of the beginning or evolution of the universe till it ends. Theory will also throw light on some of basic questions as stated below.

- Initial stage of Universe formation and its End.
- What is the initial stage conditions, and How did it Happened, its complete evolution as resultant Universe.
- Explanation of Dimensions.
- Explanation of Shape and Size of Universe.
- Explanation of TIME –SPEED- SPACE.
- Formation of Mass and its Dimensions (Different Stages).
- Types of Resultant Mass, Matter Non- matter, Particle or anti-particle.
- Mathematical Co-relation among Digital and Real universe.
- Explanation of worm-holes or time holes and existence Parallel worlds or multi universe.
- Also, exact relation of space and time will be explained with calculated mathematical results as the proof of the exactness of the theory/knowledge.

With the help of equations and explanation, I have written the theory in general words with less scientific or technical words for the best understanding of every question that could ever be asked by intelligence itself. Therefore I would request to understand the concept of the theory rather than looking for technical words. My aim is to provide the exact and correct knowledge to humans about universe so that they can choose the right path to be followed. The experiments and the results at various labs, especially CERN, will prove the theory correct and exact.

Index Terms— Dimensions, Law, Number Dimension, Quantum Universe, PI (π), Stability, Singularity,

———————————————————— ◆ ————————————————————

1 INTRODUCTION

The 1π0 Theory (Universe at every point):-The beginning of the universe can only be either from something or from nothing itself. Now, that something is stated as mathematical 1 (as representation of energy) from which the universe evolved. Remember the Newton's law that energy can neither be created nor be destroyed, but can only be transformed from one form to another. Even if it was nothing before the beginning of universe, for the existence of "the state of the nothing" it should be stable. Or the stability definitely exists. Therefore, the state of nothing is mathematically represented as 0 and the stability within state of zero is 1. As such, universe is created from '1', is the only condition, and ends all other contradictions of evolution.
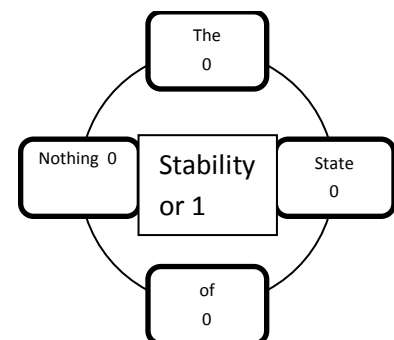

Now, the universe will come into existence only and only if there is some change in either of the 'states of nothing' or the 'state of something'. Therefore, for the creation of universe, there is an "idea of disturbance" in the state of nothing or 1 itself. This disturbance is the cause of the formation of the universe.

————————————————

- *Neehar Sanadhaya is currently working as an Assistant Professor in Engineering college and has Bachelor degree in electronics and communication engineering, India, PH-+918058246774. E-mail: neeharsanadhaya@yahoo.co.in*

The condition of the existence of one and zero will be in the form of something as 1, or stability in state of nothing, that is 1 inside 0. As such, the disturbance will always take place at 1 within itself or within the stability of state of nothing or at some of its point. This point of disturbance is the actual place of the point and place of formation of universe.
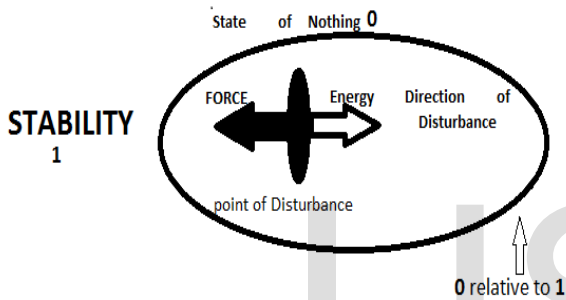

Here we have to remember the definition of point. The point is the place of the point, where the point is placed. And, the place of the point place is the place, where the point is placed. (Here one has to understand that point is not a just mathematical term, but a physical term representing the place or space.)

The idea of disturbance therefore creates the universe at the place of the point.

Now, we have our first creation i.e. POINT-Universe. We know that, Energy can neither be created nor be destroyed, and it could only be transformed from one

state to another. This Disturbance will cause the Energy transformation within the "State of Nothing" to form state of something or universe itself. Therefore the Disturbance in Stability causes Energy form the "State of Nothing" to Disintegrate (transformation) at that POINT, where the Disturbance happened. This Energy will (transformed) disintegrate at THE POINT; because there is nowhere or nothing except POINT of Disturbance (Energy can be transformed only by disintegrating, as there is nothing which could add-up to "State of Nothing" for Energy transformation). This (energy transformation) is obviously, should be in direction, opposite to the direction of Stability, or in the direction of Disturbance. Now disturbance in direction opposite to Stability could create "State of Something" (which is Energy disintegration at POINT). Below figure shows only the direction of the flow of action. While, the actual position of force and energy are vice-versa.

Also, for every action, there is an equal and opposite reaction, Stability in "State of Nothing" will oppose energy transformation (disintegration of Energy), in terms of "FORCE" towards Stability, whose direction is in direction opposite to point of energy disintegration.

The diagram below: represents view from two sides of Point. At one side, at the Side of stability, FORCE is in direction of Stability. At the other side, or the side of Disturbance, Energy disintegrates (within universe). Time represented as red circle, and Energy disintegration (light transformation corresponding to energy governed by total internal reflection; initially corresponding to stability as 1) takes place within boundary of time in yellow colour.

As energy disintegrates, new surface area in term of Time –Space is produced at every point of energy. Forces will push energy in opposite direction to every point of Energy space to shrink within itself or to drive Energy towards stability from where it escaped or transformed.

For better understanding of the theory, let us first understand and state some of the important terms.

Energy as Stability:

IT is the condition of equilibrium. In other words, stability is the condition where everything has same value. To be same its every value is equal to each other. It is singularity, mathematically it is "1 ". Or condition where value of everything is "1" and nothing else. Here everything is at absolute rest or stable. Also we can say that singularity is a place where change in speed relative to speed of light is zero. Speed of light is the escape velocity of Universe and its dimensions. Stability is a place above the point where everything is in equilibrium or at rest.

Energy transformation as Instability: A state that is not in equilibrium, or in which a small change has large irreversible effect. It is the condition after the first & only disturbance or Idea. It is the situation where everything has no value or the place of nothing or the place of disturbance. Mathematically its value is zero "0". And for general understanding it is 'Dark energy/ black hole' and its practical resultant is Universe.

Stability and Instability are the only two phenomenal; between which everything is circulating (helical path), and its every possible value is stored at point (every space under consideration), and that is termed or known as π. In other words, this Universe, every matter, non-matter, Humans living their daily life, every drop of universe, everything has its' shape, size mass as a resultant of finding stability towards equilibrium, or its movement towards stability.

Π (PI):- PI is the Ratio of circumference of the circle. It exists at the point space of disturbance as a parallel plane differentiating the stability and instability. In other words it a parallel plane of the point of disturbance, differentiating stability on one side and instability or universe on the other side.

Π Definition: -The value of PI is every value from zero to Pi, therefore the value of Pi is the 'Π' itself. So, to know about every value of Pi, we have to divide Pi within the limit up till zero.

Here we have to understand initial conditions of existence. Before the existence of the universe, there should be nothing. Or let there was nothing before the existence of the universe. This "nothing" is a proof of existence of itself or something or everything as "nothing". Then, there is (any

idea of) disturbance in stability of nothing and everything (Universe) is created. Π is the parallel plane separating the two conditions of stability and universe below disturbance.

Also π is used as the only limit in the theory because it is finite limit, moreover infinite as limit will just complex the calculations infinitely.

2. UNIVERSE FORMATION:-

Now, let us understand the concept of formation of universe and space time relation. Universe will be formed due to the property of the resultant **COMPONENTS** of energy and force. Here Speed is introduced as component of the energy while time is the component of Force. In terms of mathematics, universe will form at the intersection of speed and time component at π plane. Their exact relation can be understood from the figure shown below (Figure 2.1).

Here time is just the reflection of the speed. The value of Universe is determined by the value of light which is reflection of speed. As such, the complete universe could easily be evaluated as light ranging from 0 to 2 π; where energy or speed component range from 0 to π and force or time component range from π to 2 π forming resultant universe at π plane or π points.
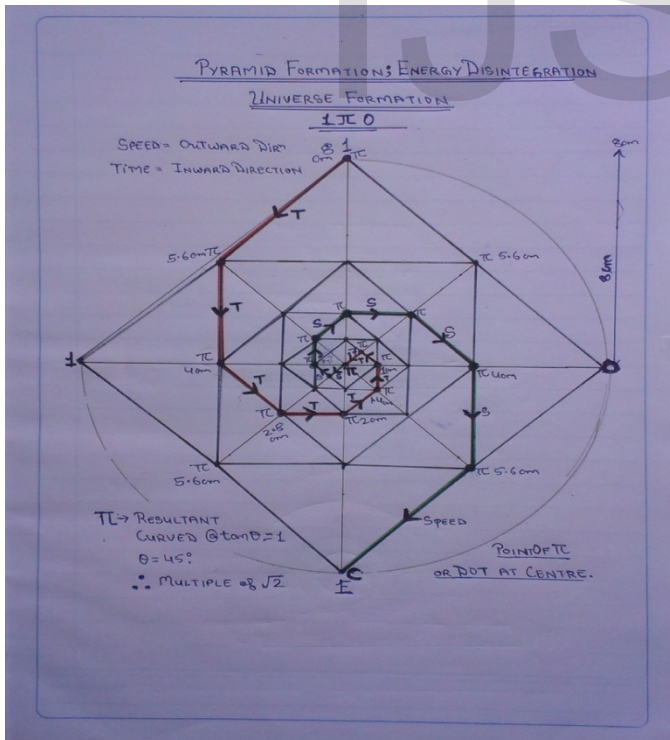

Figure 2.1

Image 2.1 shows the how energy disintegrates after disturbance. This disintegration takes the Shape of pyramid. Direction of Speed is upward while direction of its reflection as Time is downward within itself. Thereby forms the shape of universe. As such the movement of universe is downward within itself.

Also, tan θ = θ of plane of π = Sin θ/Cos θ = perpendicular/hypo = √2a = 1.41421356
➔ Therefore, θ= tan^(-1) (0.414213) = 22.5 degree. That is tan inverse 0.414213 = 22.5 degree.

This represents, Place of point space (any space under consideration) of the resultants of events of universe;
And because 180/22.5 = 8
Therefore, there are total of 8 such events between 1 to π (180) degree.
Therefore, creation of universe is in form of parallel triangle, total of 8 such triangles as Dimensions of Universe The fig shows two parallel planes of 1 and zero, and there are four quarters of speed and four quarters of Time, total of which make eight quarters. These eight quarters will represent the events /bits of Universe.

1 st Law: - Law of parallel Triangle:-

 Universe exceeds in form of plane of parallel triangle @ PI displacement. Here, every triangular plane is parallel to each-other, but never equals to the value of itself.
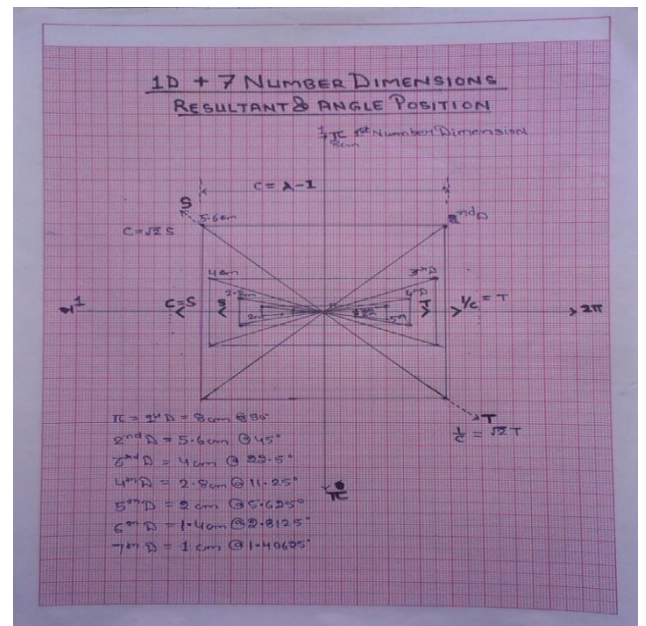

"THE PLANE OF PI IS THE PLACE OF THE POINT"

2 nd Law:-

 Plane of Pi intersects to form the dimensions of Universe@ 45 degree, making four speed dimensions at 1's side/ singularity's / Energy's side from 1 to π; and four reflecting dimensions from zero to – Pi (π to 2π) on Force's side/ Time's Side /Zero's side.

Time basically, is the interval between two end points of light/ singularity or interval between 1 and 0 (as dot at the end point).

Figure 2.2

As a resultant from figure:

➔**At point of Disturbance**

As 1/T = C ---eq. no 1

1/T+ C = λ eq. No 2

Adding eq. 1 and eq. 2

➔ **2C = λ ➔ C = λ/2.**

When S = C; T = 1 ➔ 1 + C = λ. ➔ C = λ – 1

After disturbance;

At energy's side C= √2S and also universe side or 0's side
➔1/C = √2T

Also, ➔ from eq. 2, and C max =1

➔ **(T+1) / T = λ eq. No. 3**

We also know that **λ/2 = π;**

➔ **(T+1) / T = 2 π**

Putting value 1/C = √2T ➔ T = 1/√2C

➔ (1/√2C +1) / (1/√2C) = **2 π**
➔ C = (2**π -1) /** √2
➔ And, if C = 299792458 m/s then,
➔ 299792458 = (2**π -1) /** √2

➔ **π = 211985280.50038 m/s**

And, if we calculate C/ π = we get answer = √2.

That proves that "π" is the first resultant number-dimension for the formation of the universe.

3. DIMENSIONS AS NUMBER DIMENSIONS AND THEIR SHAPES:-

The shape of the universe is shown in three different forms on graph paper. Where singularity or Unity =1 = 8cm. The resultant next dimensions are the multiple of 1/√2.

The first graph (Fig 3.1) shows the curved nature of universe. The graph is helpful to understand Length contraction and Time-Dilation (at mirror image).
Figure 3.1

Image 3.1 shows the continuous shape or curved shape of universe as shape of π at four resultant Speed or Time coordinates. If we consider the movement of π form 1 towards 0 (point), the shape also represents Length contraction (coordinate in upper half) and Time dilation (image of coordinate in lower half).

3.1 DIMENSIONS

Initially, only 'Singularity' exists, & nothing else exists, and that is non dimensional.

Then the first dimension is the dimension of "light", the dimension 'intelligence'. Nothing else exists except singularity/ stability as 1st dimension of light or intelligence. And the shape now can be represented as straight line. Its position is at unity or 180 degree from point of disturbance.

Then, there is second dimension, the dimension of "π" or 'Will'. Now, there exists singularity, 1st dimension. It is the first number dimension. The shape is now parallel. And its resultant position can only be at 90 degrees from point of disturbance.

Then, there is third resultant dimension. It is the dimension of 'Self-Conceit'. Now, there exists, singularity, 1st dimension, 2nd dimension and 3rd dimension. And nothing else exists. The third is the orthogonal shape or shape as triangular pyramid. It is at 45 degrees.

As such, the fourth dimension is the result dimension of universe and exists on four resultant points of π. The shape now changes to Pyramid of four sides. These are the resultant sides of universe as resultant speed at 45 degrees from 0 to π or resultant time at 45 degrees from π to 2π. Shape here will be a triangular shape combined to form shape as four dimensional pyramids. Its position is at 45 degrees. It is at 22.5 degrees from point of disturbance. As such exists on eight points at the rate of 22.5 degrees.
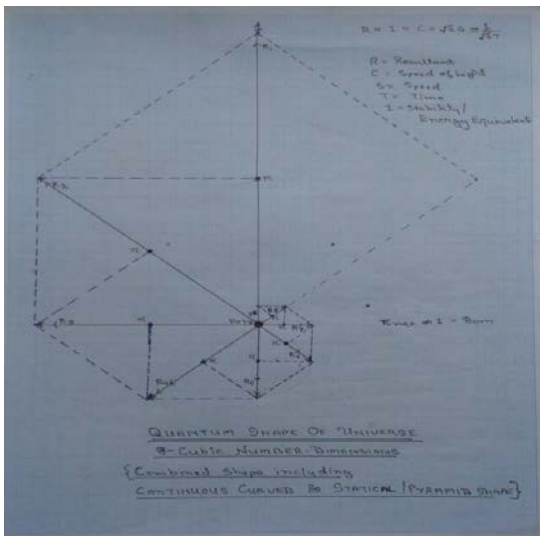

As such there is universe in 4th dimension, which is in zero mathematically or (inside a black hole). Therefore, mathematically it is evident that universe is just the reflection of light of intelligence above it.

The 4th dimension or universe can only be the resultant of three dimensions above. We know that mathematically, diagonal is the resultant and is √2a of side 'a' of quantum square or quantum cube. Therefore, universe is multiple of √2 as the resultant or diagonal of the cube of three dimensions present above it.

The number dimensions from 4th to 8th dimension exists as resultant number multiple dimensions. Π is the ratio of circumference of circle, or simply, it is curved. As the dimensions are just the resultant dimensions π itself, therefore they are curved. Therefore, the resultants of each higher dimension try to exist at same space by trying to overlap each other thus, exists in transformed atomic form. Or to state simple, atoms are formed the resultants of higher dimensions. Further there is nuclear dimension. Their resultant percentage and energy equivalence can now easily be calculated from the figure. These dimensions can easily be understood to form four fundamental forces.

From the graph, it is also evident that for any universe or point or dimension under consideration, only odd numbering dimensions will be visible in form of the mass. The even numbered dimensions will only correspond to wavelength. This is due to the angular position of the dimensions with respect to each other. Also the 'Event horizon' will correspond to Maximum wavelength (λ max) for any dimension or universe. This wavelength is the corresponding wavelength of part of speed of light. This can be better understood with help of Mathematical calculation of Dimensions calculated below.

The graph (fig 3.2) represents the Quantum-Curved Shape of Universe.

As such there is the Law of parallel triangle, which states that,-"Plane of universe is triangular plane, and the resultant is universe as the resultant of parallel triangle." And is the multiple of √2a, where 'a' is side of triangle or side of cubic volume of universe.

3.2 CALCULATION OF DIMENSIONS:-

Dimension 1st:-
From equation:- C = (λ-1)/√2
→λ max. = (299792458*√2) + 1
→423970561.00077 metre (Event Horizon for our universe)
→λ min. = 1/ λ max.
→λ min. = 2.3586543311864 x 10^-9
That shows that our 1st Dimension will be visible from 10^8 metre to 10^-9 meter.

Next Dimension will have seven number dimensions. Then, its length is the resultant length as multiple of (1/√2)^7.

Dimension 2nd:-

Therefore: λ min. = 2.38653311864x10^-9 / (√2)^7 = 2.0847755900712x10^-10 metre ~visible as X-rays.

Then, length of this Dimension = λ/(√2)^7 = 2.08477....x10^-10 / (√2)^7

→1.842698962394 x10^-11 metre

That is corresponding to length of X-Rays.

Dimension 3rd:-

Above λ = 1.842..x10^-11 of Dimension second will be maximum wavelength for 3rd dimension.

→Therefore λ max / (√2)^7 = 1.842....x10^-11 / (√2)^7 = 1.6287309294731 x10^-12 metre.

That will be corresponding visible Mass Dimension and visible as Mass of electron.

Dimension 4th:-

Above λ = = 1.6287309294731 x10^-12 of Dimension second will be maximum wavelength for 4rd dimension.

→Therefore λ max / (√2)^7 = 1.6287309294731 x10^-12 / (√2)^7

→ = 1.439608356437x10^(-13) metre

This is corresponding visible as Gama-Rays.

Then, length of 4th Dimension = λ /(√2)^7

→1.439608356437x10^(-13) /(√2)^7
→= 1.2724460388618 x10^-14 metre.
That Corresponds to length of Dimension of Gama-Rays.

Dimension 5th:-

Above λ = 1.2724460388618 x10^-14 metre of Dimension second will be maximum wavelength for 5th dimension.

Therefore, λ max / ($\sqrt{2}$)^7 = 1.2724460388618 x10^-14 / ($\sqrt{2}$)^7

→=1.1246940284664 x10^-15

metre.

This λ will correspond to the mass of Proton or Quantum Dimension.

Similarly values can be calculated for

6th Dimension (will in form of rays) = 9.9409515877568 x10^-17 to λ/($\sqrt{2}$)^7 = 8.766428489375 x10^-18 metre.

Then 7th Dimension (will correspond to some mass)

→=7.766368427935 x10^-19 metre.

Finally, then, 8th dimension = λ max / ($\sqrt{2}$)^7

→=7.766368427935 x10^-19 / ($\sqrt{2}$)^7 = 6.8645647257324 x10^-20 metre.

Length of this dimension = λ max / ($\sqrt{2}$)^7 = 6.0674753343242 x10^-21 metre.

Thus values of all dimensions have been calculated.

We know that:-

E = mc^2 and E= hc/λ

Here E is energy; M= mass; C= speed of light; λ= wavelength, and h= planks constant.

Then, E=hc/λ

→At max. E=1. Then h = Nh (let say neehar's constant)= λ/c

→Nh= 423970561.0007/299792458 = 1.4142135657088 Joule.sec

From E=mc^ and E=Nhc/λ; Equating both equations:-

→mass = Nh/cλ...... eq. No 7

Mass m = Nh / cλ.......Eq. no 7

Nh= Neehar constant = 1.4142135657088 Joule.Sec

C=speed of light; λ= corresponding wavelength of C

Let us calculate:-

Mass of our 1st dimension or Universe = Nh / cλ

→=1.4142135657088 / (299792458 x 423970561.00077)

→= 1.1126500560537 x10^-17 units

Then, Exact Mass of atomic dimension now on earth:-

From 5th Dimension λ = 1.2724460388618 x10^-14 (λ Corresponding to proton), then

→λ max. =1/Dimensional λ = 1/ 1.2724460388618 x10^-14 = 7.8588794295316 x10^13 metre.

Then, Mass max. = Nh / cλ

→= 1.4142135657088 / (299792458 x 7.8588794295316 x10^13)

→= 1.4142135657088 / 2.3560327813049 x10^22

Therefore Exact Mass of Atom/ Quantum dimension →= 6.0025207498408 x10^-23 dimensional units. This result proves the theory. The result is Avogadro's constant in time dimension.

Also, we can calculate that:-

Mass of universe / Mass of proton (quantum dimension) = Total no. Of protons (quantum dimension)

Therefore, number of proton= 185363.80004737.

And, total number of dimension 8^8= 16777216

Then subtracting 8^8 – 185363.80004737 = 16591852.199953

→= (7.9888976790434)^8

And 1/ 7.988976790434 = 0.12517371484469 Part of dimensional Universe is still waiting to be formed.

Then Dimensional Universe formed = 1- Dimensions waiting to be formed.

→=0.87482628515531 Part of dimensional universe is already formed.

And, 1/0.87482628515531 = 1.1430840807698= Let = x,

→Then, x^8 = 2.9149117610261 Dimensions have been already formed out of our universe or out of our universal dimension (C=299792458m/s).

Then, 8 - 2.9149117610261 = 5.0850882389739th is the Dimensional position of our Universe with respect to Unity.

That result shows that we Humans are in 5.0850882389739th Dimension right now [Considering C=299792458 m/s].

And let us plot this on our Dimensional graph and locate the position of our present Universe.

When Singularity or Unity = 1 = 8cm, then, 5th D is 2cm.

Then, Position of our universe = (2/5) x 5.0850882389739th = 2.0340352955896 cm.

Also, 2cm =45degree then, our universe = (45/2) x 2.0340352955896

→Answer = 45.765794150765 degree.

3.3 LET US ALSO LOCATE OUR EARTH IN THE UNIVERSE

Total time of one day = 23hr 56min 4sec = 86164 sec. These are produces by eight quarter of universe. Therefore, Time in one quadrant T = 86164/8 =10770.5

We know that, $1/C = \sqrt{2}T$, Then $C = 1/\sqrt{2}T = 6.5652177817794$ x10^-5 m/s

Also, $C=\sqrt{2}S$ → Speed = 4.623100134627 x10^-5 m/s with respect to our universe,

Let it be =x;

Then, Actual Speed of Earth =299792458 / (x) = 6.457829337778 x10^112 m/s.

Further, when C= 299792458, Speed = 6.457...x10^12 m/s,

When C = 1, Then, Speed of earth = 21541 m/s.

Then, $\lambda = C*\sqrt{2} +1 =6.56..\times10^{-5} *\sqrt{2} +1 = 1.0000928462003$ metre.

Then, Mass = $Nh/C\lambda$ = 4.7168707411006 x10^-9 kg.

Then Total number of dimensional earth mass = Mass of universe / mass of earth

→ 2.358873323789 x10^-9 ; let= y and 1/y = 423931200.5996 Means earth has completed π Shift. And then, (1/y)

And, Total number of dimension = 8^8.

Then, Remaining number of dimensional mass = 423931200.5996 – 8^8 = 407153984.5996

That means earth has completed its dimensional cycle. And, number of times it has completed cycle =

423931200.5996/ 8^8 = 25.26826820944 times. The light had already shifted 25 times completely [interchanging of axis,(not north or south poles)]. Or Earth is moving in 26th π position.

→= 407153984.5996 = (11.918451572332)^8

Then, 1 / 11.9182.. =0.083903516654922 part of light has already transformed for earth's dimensions.

Then, 1- 1/11.981.. = 0.91609648334508 part of equivalent energy of light is still to be transformed to earth's dimension.

They will transform into eight dimensions.

Therefore, y^8 = 0.49605488182503 number of Dimensions have been waiting to be formed.

Then, Dimensions already formed = 8D-0.49605488182503= 7.503945118175 Dimension have already been intersected or formed.
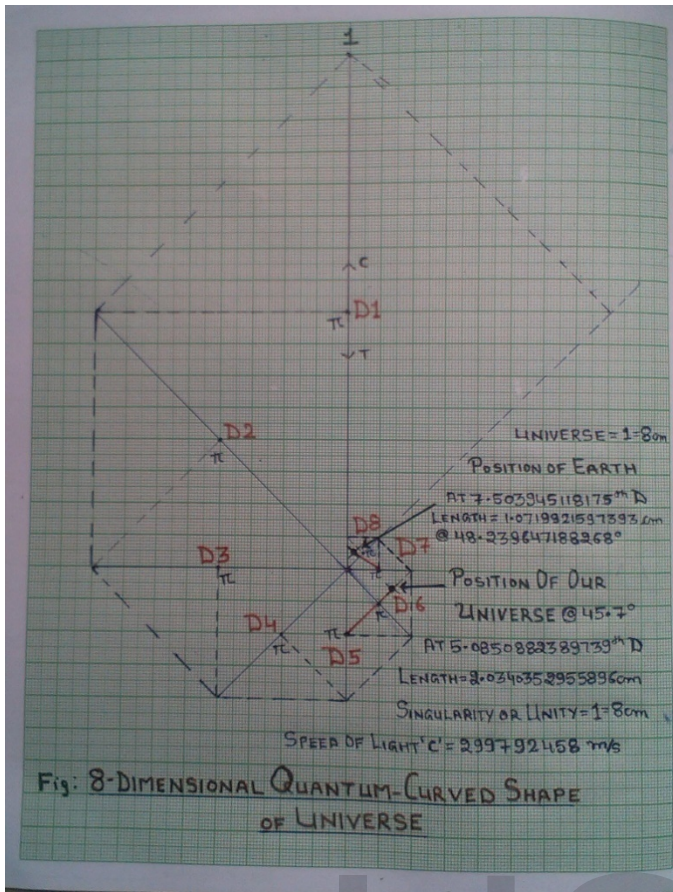

That shows the current position of the earth.

To locate it on our graph we see that, when universe =1 = 8cm

Then, 7th D= 1 cm. Therefore, our position = (1/7)*7.503945118175 cm

➡ = 1.0719921597393 cm.
And, we have 1cm=45 degree; Therefore 45*1.0719 = 48.239647188268 degree.

Fig: 8-DIMENSIONAL QUANTUM-CURVED SHAPE OF UNIVERSE

Now, let us also calculate mass of electron:-
We have electron in our third dimension, and its corresponding λ= 1.842..x10^-11, Then λ max = 1/ λ min

→1/1.842698962394 x10^-11 = 5.4268223969737 x10^10 metre.
→Mass = Nh/cλ = 1.4142135657088 / (299792458 x 5.4268223969737 x10^10)
→**Mass = 8.6925798184527 x10^-20 units.**

Also, Then Total number of dimensional electron mass = Mass of universe / mass of electron.

→ We get =127.999998151202 electron dimensions

Then, total number of dimensions – dimensions formed= Dimensions remaining.

→8^8 - 127.999998151202 = 16,777,088.000018 = (7.9999923705811)^8.
→Then, 1/(7.9999923705811)^8 = Electron dimensions have been Already formed.
→Then 1 – Dimensions formed = Dimensions Remaining.
Therefore we get = 0.87499988079022 Dimensions are remaining.
Then, total of 8 Dimensions - 0.87499988079022 = 7.1250001192098 have been already formed.
The Dimensional position of Electron is 7.1250001192099th Dimension.

 To plot it on our graph paper, we know that 7th D = 1cm. Then its, 1 D is 1/ 7cm. Then Above dimension = (1/7)x 7.125000119209

→We get Length of Electron position on graph 1.017857598871 cm.
→Also, 1cm =45 degree then, position of electron dimension = 45.80357219492 degree from 7th Dimension.
[Note: Graph is not added for simplicity. Position can be viewed approx. 2 degree before position of earth on above graph]

Comparison of the positions of Electron and earth:-

From our above calculated values of graph, Earth's D = 1.0719921597393 cm and electron's D = 1.017857598871 cm.

Then, Difference in Dimensional length = 0.0541345608683 cm

When C = 8cm, then difference = 0.0541345608683,

When C = 8 metre then difference = 5.41345608683 metre.

When C =1 metre, then, difference = 5.41345608683/8 metre

When, C =299792458, then Difference =202864163.31823 m.

This difference is in Speed dimension of the universe, then, in time dimension;

→1/Speed =4.9294068683354 x10^-9 metre.

This shows that the electron is visible at radius of distance of 4.9294068683354 x10^-9 metre whenever it is observed from earth. Also, angular position can also be calculated similarly.

Similarly, all values of universe in any form of year, week or days, length mass or time, Force or Energy and the resultant positions of resulting physical universe and all its dimensions can be calculated exactly. In short every calculation about universe can be done at every point.

4 CONCLUSION AND RESULTS:

1. Unity or stability or singularity exists. Light is the fundamental dimension, and resultant universe or its dimension are the position of light (and its energy equivalence) at different angles.
2. Idea of disturbance caused the formation of Point-space as the plane of π. The plane of π is a parallel plane.
3. Universe is formed as the reflection (Light) of Stability or unity or 1.
4. Π is the only and every maths of the universe.
5. Light forms the 1st Dimension of the Universe. It is also the dimension of intelligence.
6. Second dimension, as first number dimension is 'π' itself. It is the dimension of 'Will'.

7. The Universe Exists as seven resultant number dimension of Light, and thus every entity can be represented as a number, thus shows that everything is certain.

8. $1\pi0$ – is the equation which holds everything from 1 till 0 (dot/point/black hole). In between the universe exist in every form and only form of π.

The theory easily explains the complete concept of universe. Whatever Einstein said, theory has given a proof of that.

The theory is the theory of everything: It represents unified theory. *TO conclude: The shape of everything in this universe is same and exact. The*
Change is, just in 'Point (place/space)' of observation, and it is just relative to
resultant positional distance of observer both in terms of angle and length of time.
It is 1, it is the only thing that exists. What do we observe: A universe or galaxy or an atom, appear different as it is just the difference in the position of the point-space of the observation/observer, both in terms of Space angle or length of time of space.

To summarize everything in five steps, the steps are shown:

1 SINGULARITY/ Stability

0 ZERO

) (TWO REFLECTED SEMI- CIRCLE

Δ TRIANGLE

10 DOTS IN TRIANGULAR BOUNDARY

These are symbols given by some great mathematician as representation of universe. I can just say that this is exactly what my theory is.
Theory explains everything, each and everything, every co-relation of universe in terms of speed or time, matter or antimatter, worm-holes or whatever else, working of our brain or neurons or storage of knowledge of every point will be explained to its true value.
The detailed study and explanation of theory and universe is provided in the book "Who am I: $1\pi0$ – The theory of everything".
