Abstract

Taking pictures of a person from time to time can help and recording the sound of a person from time to time also helps to treat a person by the computer , but the use of computers in a person's life can join two generations, it is the linking of life. If we record all the life of a man on a computer then tell this to a child that he was that man , the child will think ,he was that man and will do like the person before(in most of the cases).

Treating a person by taking pictures of his activities and pictures of every corner of body will be more helpful than treating without knowing the person's time to time change in his picture. If we keep ourselves in a service line camera then we can be safe from diseases and we can know our deformities easily. Taking pictures of each part of our body will show us the deformities occurring in our body from time to time. So the treatment of a man will be more helpful than before by computer.

When a person is ill then his total thinking changes from one side to another. If we continuously make questions to that person then the person can express his bad feelings to us or to the doctor. That is he can say some answers to your questions by feeling bad for his illness. If we record his voice or answers on a computer then we can easily find out whether he is in a different mood or not due to his illness. If we go through an online checkup (by taking pictures) then we can easily find out whether we are bad or good. The woman who is pregnant can feel different feelings in her pregnancy and if we plot her feelings report in a graph paper then all

the normal birth of a baby seems to be a same formed graph. So by looking at the graphs that are the sound or the picture of the mother from time to time we can treat .

A baby does not know about its thinking or express all the thinking to us and an old aged person forgets many things before death. If we put all the happenings of an old person into a computer and tell all this to a new born baby that he was that person then the new baby will fix his memory with that person's life and can act like him and if there is a like relationship then it will be a life memory linking of two person. This is a memory creation of a baby but it can be possible if we always tell the baby about the previous man and the baby must be shown the picture of that man's childhood. It also happens in a person after enjoying a movie. So I say that we can also create by showing a movie always to a baby or a child. Actually it is a creation of addiction into a thing. But this addiction helps us. It will act as a treatment.
