Learning Management System

Wael Alabdulaly

LMS or Learning Management System it is an application or an entire system used in any modern learning environment to generally administrate, manage, monitor and control the learning events.

— — — — — — — — — ◆ — — — — — — — — —

Common features of Learning Management Systems:

• Online (eLearning) course launching and tracking.

• Classroom instruction management is included in most full-fledged corporate LMSs.

• Blended learning is the ability to manage course which mix online and classroom.

• Reporting. All good systems provide good reporting functions.

• Mobile learning. Learning can be accessed on smartphones and other small devices. (Don McIntosh, 2015)

Choosing the Right Learning Management System

Of course there are many learning management system in the market, choose sets the parameters for how you will deliver online learning. You've heard praises and cautionary tales about all of the LMSs, so it's difficult to know what is right for your institution. Should you go with a full-service subscription solution like Blackboard, Desire 2 Learn, or Canvas? Or go the open-source route with popular tools such as Moodle or Sakai? This system will be your administrative, faculty, and student interface and will determine the structure of much of the data associated with your online learning programs. (L. Roxanne Russell, 2013) from my opinion, your best resources in functional side will be your students, teachers and instructional designers. From the technical side, you're learning management system will need to be supported by well-trained IT support. The primary goal of your institution may help to determine which learning management system is an optimal for you need. Also, the size of your organization will impact your decision which tool is going to fit you best. Organization should put in mind students resources for accessing the system equipment, connection, and ability to understand new technology.

Finally

Learning management system or LMS employ technology

to facilitate education cycle and learning activities

especially for distance learning students.
