

The Modern Origins & Sources of China's Techtransfer

Yang Pachankis

Abstract— The research identified the key element on P. R. China's incentives in modern history on techtransfer practices. With reviewing on the state funding surrogacy in the natural sciences, the author identified the key militant coercive contracting clauses in the document of the National Natural Science Foundation of China. With its combined workings with the statutory & martial laws, the analysis takes a comparative culture approach that partially counteracts the work of the "United Front Working Group of the CPC", which constitutes as the major cyber espionage organization that manifests upon the communication & information technologies. The "United Front"'s work has substantially undermined the premisses of market economy and eroded the markets' self-organizing & self-regulating functionalities. With heterogenous semantic networks taken into consideration, the psychosociological elements were taken into consideration even with the psychological data codings in the semantic networks of P. R. China.

Index Terms— Cyber espionage, ethical risks in technology, heterogenous networks, market coercion, market deficiency, scientific funding, surrogate economy, semantic security, techtransfer, humanitarian laws, cultural Machiavellianism.

1 INTRODUCTION

WITH the top-down indoctrination of communist & dictatorial propaganda enforced in all education system in mainland China, the psychosocial prototypes of the Chinese academic & human thought processes are largely predictable. The power projection from the Mao Zedong dictatorship is still the major psychosocial dynamic factor for P. R. China's international behaviors, and the only variation is the discourses in diplomatic channels. Apart from the Russian hegemony's power political lure of thermonuclear knowledge, the ecologically disastrous Three Gorges Dam (TGD) building after the 1989 Tiananmen Square Massacre still served the illicit purposes in mass destruction nuclear weapon production. [1] The energy politics hence became the driven factor for P. R. China's techtransfer practices with its centralized banking system, whereas the "free" energy source is manifested upon. The article puts forth a theoretical measurement on the earth's internal heat budget in monitoring and quantifying the economic costs of the unrenovable natural resources of earth. The theoretical measurement is consistent with the geologists' warnings on the earthquake damages before the coerced militant & dictatorial decisions in building the dam. The earth's internal budget hence can effectively restrain & constrain the destructive behaviors of the militant practices that have now shifted to chip productions for global cyber espionage & surveillance purposes in the market economies. [2]

The communist power formation in mainland China, apart from Russian hegemonial designs, used expropriation as the dominant organizational margin coercion. [1] [3] Forced immigration for the building of the TGD had been the consistent criminal logic in the exercising of governmental power. The modern & contemporary developments in technologies by techtransfer mainly serve the same purposes, and the

misattribution of expropriation to compliance models by many technology companies has resulted in the adversaries' manifestation of fraudulent claims on cyber sovereignty. With the illusions of the "free" energy sources and energy politics led by the Russian hegemonic power over P. R. China, the foreseeable individually targetable mass surveillance networks' impact & impact on liberal democracies are concluded in the paper.

2 METHOD

2.1 Scientometrics

The scientometrics were performed on the Baidu scholar search engine. Scientific literatures years before the building of TGD and before 1989 were found in geological sciences warning the increase in frequencies of earthquake happenings in the affected geological areas by the construction. [4] With TGD & earthquake as keywords search, there have been 110 papers discussing the problem before 1990, and by a decimal interval of years up to 2020, the increasing rate of relevant papers on the earthquake problem are 10.91%, 184.43%, and 4.90%. No source is found on the analysis of the causal inference of the earthquake problem, and recent papers in P. R. China suggests new earthquake detection sites are introduced for emergency response only. [5] No established causal quantification method has been established concerning the harmful geological consequences from the nuclear weaponry production purposed TGD.

2.2 Quantification

As the ongoing investigations on cosmic time has not yet reached a scalable phase from the qualitative research, current quantification method focuses on the geothermal gradient in the Big Bang model approach to the internal heat budget of the earth. Apart from the resonance effects the earth's core has in the cosmos and in the solar system, the evolutionary cosmological view puts the earth's internal heat resources into a relatively limited unrenovable quantity that drove the formation

- Yang Pachankis is married to Greg Dufner & John Pachankis by stare decisis. He is currently working on cosmic time in relation to black hole and white hole juxtapose (thermonuclear binding) theory. His research is currently supported by his original family. E-mail: yang.pachankis@gmail.com

of inland riverbeds in the earth's geological history. Therefore, the limited geothermal resources of the earth need to be taken into economic account in hydroelectric power plants, especially for the large-scale constructions exemplified by the TGD.

As recent reported data suggest, the shifted discharge of the TGD is 69,744 (July 17, 2019) and 81,807 m³/s (July 13, 2020), with annual mean discharge of 29,163 and 34,763 m³/s in 2019 and 2020, in the water body spanning 6,300 km and a basin size of 1,808,500 km². With the gravitational constant on peak discharge, 1.045×10¹⁵ kg and 1.226×10¹⁵ kg of raw materials can be compressed by seconds for nuclear weaponry, with a backward trace of 30 years. [6] The geothermal costs of the riverbed heat conduction in the correlation between geothermal gradient and conductive heat flux, further hydrothermal costs of hydroelectric power plants can be acquired with thermal conductive samples of riverbeds. [7] Such costs are necessary to evaluate the factors of energy needs from human activity to the contribution on the temperature drops of the earth mantle.

2.3 Literature Review

The review of literature took a careful examination of the contractual structures & clauses in the "natural science" funding body National Natural Science Foundation of China (NNSFC). Scientific activities, in most countries, are funded by governmental agencies. The fundamental issue on P. R. China largely transforming scientific findings globally to military technologies shaped a key realpolitik approach to the international normalcy with creative commons policies. The literature review identified the realpolitik & coercive elements of the regulation & administrations set forth in the document. [8] Moreover, with the multilateral regionalism schemes, such contractual clauses & imposed rules on the academic & scientific communities substantially turned the Chinese scientific community to trade, commerce, and intelligence entities via contract and top-down declarations of legislation. [9] Such method is conductible through the liberal institutions and penetrable to the cyber and security realms in other countries. The realpolitik approach is largely explainable to the source of P. R. China's militant expansionism and resource affliction in the financial system and global economy, which renders the normative sanction practices ineffective. [10] The individually targetable mass surveillance and human trafficking harm inflicted on me during my graduate research in the Communication University of China is explained by the coercive realpolitik clauses implemented in the education institutions. [2] The main issues, in the spirit of science, identified in the clauses & "rules" are listed as follows: 1. Limitation terms, 2. Limitations of scope, 3. Technological focus and currency, and 4. Erosions on scientific morality & ethics. The morality and ethics issues of coercion in higher education in mainland China is through the legal person imposition on the minister of education of P. R. China.

The NNSFC terms put the prerequisite of the affiliated company, implying universities, as the foundation of application. Even though the regulation does not prohibit unaffiliated persons from applying funding from the NNSFC, any persons applying for the funding would have to be contracted to the companies, hence the universities. The funding prohibits indi-

viduals from applying and is open to universities in Hong Kong (SAR) and Macau. The academic advisors hence are put into a supervisory position to approve or reserve any degreed individuals from scientific activities. Such limitation terms imposed on universities largely explains the human rights violations incurred on me with the China Academy of Science behind the operations. [2] The prerequisites of the funding stresses regionalism and prohibits international or global identities of the researchers or scientists. [8]

The application materials of the regulation are drafted with a top-down political categorical rationale. Contrary to the question-driven approaches largely adopted by the global scientific communities, the scope in the application materials is limited to problem-driven categorical attributes. And the application material stresses on not appearing any contents that is contrary to the laws and regulations, or concerning secret information and sensitive information. This means that the IEEE system can be adjusted on the backend contrary to the open data policies established in the global scientific normalcy. Information security is repeatedly stressed in the document, and not only the affiliated companies are stressed in the information management sections, but also identity cards as the top-down identifiable trackings. Therefore, any projects concerned with international communications becomes of information intelligence with regional focus in the project regulation section. This means that my dissertation with a global focus in outer space security was & possibly is prone to be manipulated under the power political framework. [11] Albeit I intentionally changed my linguistics and psychosocial mental construct as counteracting measurements on the dictatorial semantic network, no perfect security is guaranteed. [12] The VISA issuance problems of mine in attending The Science of Consciousness 2022 conference on an individual basis can also have been contributed by the political factor.

The currency management outlined in the regulation are divided to two years and one. This is associated with the centralized banking system of the country with developments in centralized cryptocurrency in hiding the traces of covert operations. Even though international and inter-organizational projects are listed in the section with inter-organizational frameworks, the limitation terms combined with currency management in essence still puts such projects into trade and commerce orientated essence than scientific and academic purposes. Technical and equipment accountings are specifically listed and the foreign scholars listed in the section hence gets to be contained in the framework in the limitation terms. The budget proposals are typically planned economy accounting, and the funded agencies becomes of outsourced contractors. Publications are effectively defined to the limitations of information communication, propriety rights, documentation, and etc. Any cooperations are restricted to the border management for the funds, and the hierarchical structures are deducible to personal liabilities. This means that coercions with power political legislations can be hidden in the scientific communities, and the monetary regulations imposes unlimited personal liabilities for retracting money.

Even though morality and ethics are literally stressed in the document, the fundamental moralities and ethics for academic

freedom is not respected in such regulatory drafting. Moreover, the “morality & ethics” listed in the literary interpretations only mean for the dictatorially interposed human manipulation disregarding the inherent dignities & autonomy in the human persons that underlies the basis of the Universal Declaration of Human Rights. The administrative authorities are deferred to the newly founded dictatorially CPC Central Commission for Discipline Inspection and is prone to the nominal law of the “judiciary” systems. [8] [9] Such top-down hindrance of power politics on the scientific activities is sheerly predatory and utterly party political. It means that any free form of scientific activities and independent scientists are prone to be restricted and all degreed researchers and scientists are politically controlled by the surrogacy of the universities and affiliated companies based in mainland China. The ethics and moralities in humanitarian values are therefore, disguised under cultural diplomacy, and linguistic codes can be adapted to infiltrate the global cyber space with cyber sovereign claims and backend data manipulations. Such resources intensive controls on the scientific communities largely explains the military spendings and militant expansionism of P. R. China’s global behavior. Libertarian approaches may assuage some human harms in the liberal institutions, but not efficient in eliminating the intrusions in the liberal institutions. [2]

In summary, the literature review found that the realpolitik strategy the military dictatorially country has developed is undermining the scientific activities in the global society, and has effectively shaped a coercive mechanism from a hierarchical command chain on an autocratic, dictatorially, and nationalist top-down strategy. The limited scopes for scientific funding and especially in the natural sciences have undermined the global equitability of knowledge production and sharing. Such political problem imposed on the academic and scientific world can not be properly resolved without countermeasurements, appropriate political actions, and defense strategies. [2]

2.4 Book Review

The books reviewed for the research are *The Search for Modern China*, *The Dark Side of Personality: Science and Practice in Social, Personality, and Clinical Psychology*, and *1421: The Year China Discovered America*. The book review, in relation to the maritime & geopolitical ambitions of the Russian hegemonic sphere, two preliminary psychological countermeasurements on the characteristics of the Chinese “United Front Working Group (UFWG)”’s impact have been adopted in the researches, and the autocratic nationalism’s psychological prototype in the cyber domains is identified as the Machiavellianism model in the dark triad, whereby the mass psychological consequence is summarized as the infliction of condescension. [13] The political assertions of Chinese media are characterized with the UFWG. Its coercive force on the market commercializes the propagandas, apart from the military connotations in the media. The military assertions in media in substance makes diplomatic uses of media and bypasses international law. The forceful use of media, apart from the dictatorially cultural invariable, is not only the source of mass psychological coercion & public mental health risk factor, but also is a self-

defensive mechanism on international crime(s). The chicanery uses on the terms of sovereignty, decolonization, and independence as in “domestic affairs” have been the key instrumentalization of the governmental bodies. [15] [16] Such psychologically intrusive methods also shaped the non-identity problems for the marginalized LGBTQIA+ population & wider victimized population. Regardless of the insignificant approach to the book review in relation to the mass approach implemented by the People’s Liberation Army (PLA) with library and book intelligence implemented in the Chinese universities, that can be potentially combined with the multimedia works conducted by the UFWG, such approaches are still necessary in preserving the mental health of the researcher, in the context that, those combined with telecommunication intelligences, machine learning, artificial intelligence, natural language learning, and etc., will further intrude the global security through time series and consequentially outer space security via domain politics. The anthropological lens in *1421: The Year China Discovered America* helped with the anthropological rationale preservations on the country of origin from birth of the author.

2.4.1 Book Overview

The Search for Modern China drew a map on the Chinese civilization under the communist regime, with nested interests from blood and wars. It paved the evidences for the crimes the CPC has done under the Russian hegemony with the disguise of a nation. These basis supports the fact that the Nuremberg trial consists of the victors’ “justice”, albeit the cases on the ordinary evils with great harms done to humanity is not without the concept of justice in and of themselves. The nationalist power politics defused in the civil society is the source of injustice and human rights law violations in the Chinese declarative law system with totalitarian judicialization. Spence adopted a scenic poetic portrayal on the Chinese civilization to the maritime histories. It rooted on the notion of modern nation-states signified by party politics with an aesthetic & anthropological lens. Its translated versions strictly and robustly adhered to regional compartmentalism in the indigenous deductive conceptualization of the content matter, henceforth volumes to a fraction of international law & order itself. The acknowledgement on limitations in history studies are subtly expressed in the use of articles with gendered wisdom of generation in conflict management. Such Shakespearean apathy deprives the book of any apparent value judgement, except for the lengthy analysis on ethnic nationalism that accounts for one half of the book volume. Evangelical Catholicism with Fordist values is disclosed by the careful utilitarian analysis in the civil war histories between the communists and Guomindang (a.k.a. KMT), amongst the global nexus of interests. The competing interests between the Russian hegemony and democratic countries are especially detailed in the realist analysis of liberal institutionalism. The poetic avoidance to power politics and sources of violence is clear-cut in the textures. It undermined the Evangelical messages with sheer hope and trust of humanity - the heteronormative notion of ethics. It overlooked the Chinese communists’ diabolical utility of normative ethics in the Tibetan massacre, whereby infants were killed - they were afraid one day, when the lost souls grew up

and knew the historic facts, they might seek revenge.

2.4.2 Machiavellianism of the Chinese Culture

One of the major negative factors underlying the formation of multiparty system in the region is the Machiavellian elements of Chinese culture. Spence briefly mentioned the Baojia system in the Chinese civil wars and rivalry between the CPC and KMT, which seems indifferent to curfews. The Chinese cultural subtleties in the belief of power control in coercion theory is the coercion on close relationships. [14] Family in the basic forms of interpersonal relationship and fundamental component of society underlies the rationality and essence of Baojia system, hence its predecessor Hukou documents. The calculation of interpersonal relationships is contemporary in the Chinese cyber deployments and artificial intelligence backends, which underlies the mass surveillance rationales and targeted sanctions on families. [2] This can cause the greatest pain on the imposers' perceived enemies. [3] The advantage of the method is operational covert with low costs other than visible wars. The subsidiary advantage is the pain incurred to persons & human groups' morales that prominently or potentially disinterest the imposers' illicit gains in other areas. With the dualistic approach to international law with nominal laws for domestic control, the generated data could have been used for more realist analysis in the financial sectors in global economy with the Great Firewall of domain politics.

Massacres are not modern phenomenon in Chinese governance. The descriptive accounts on the repeating patterns of Chinese governance in civilizational models in the book overlooked the grandiosity traits of organizational behaviors started from the Qin dynasty with the emperor who first "unified" the Chinese sovereignty. The grandiosity of a supreme leader is consistent with the ancient Chinese culture thereon, and persistent with the Communist propagandas that overt the triumph of popularism, namely the ideological security the CPC takes on against humanitarian values in liberal internationalism, with strong top-down censorships. In military psychology, the talent cultivation of narcissist grandiosity traits based on nationalism perceptions are used as a morale building method, and the sophistry of diplomatic rhetorics in academic settings are not uncommon. [13] [42] The modern & contemporary psychological warfare with ontological frameworks have been found to be based on Stalin's nationalistic theories adopted to holism, hence the revisionist nationalism based on "soft power" in P. R. China's modern behavior in the global system. [2] [16] Thus details are overlooked by the book, for the confrontation and value proper of the allies against the axis power. One of the criticisms on the Nuremberg trial being the victor's justice in peacetime hindsight cannot be overlooked, by one of the judging nation USSR being behind Stalin dictatorship that misrepresented the foundational perceptions of democratic justice.

2.4.3 The Power of Nuclear Knowledge

The depictions on the trail of nuclear knowledge are subtly hidden in the consecutive figures on the lost lives of humanity, whereas the power of nuclear knowledge is not forgotten by the Communist cadres. The callousness for territorial power

persisted the CPC's decision, from leadership to leadership with *post facto* admittance by the global community's undeniable evidences. [2] [29] The power feed from Stalin determined Mao Zedong's "One-Sided" policy during the Cold War in exchange for the thermonuclear knowledge Russian spies fetched from U.S. and Germany. [29] Even the 1989 Tian'anmen Square massacre did not stop the consistency of conduct. The Three Gorges Dam was propagated to serve the civil economy. Even with great efforts of the scientific community warning its negative consequences, forced migration was dictated to ensure its construction. The control of the ancient trade rout is capable of providing consistent direct current for the thermonuclear weapon production underground, hidden from radar detections. The optimistic relief in the structural realist reading of Asian power politics is a non-ommissible flaw in the book - the overlook on the depth of darkness.

The historic accounts of America's intervention for a multiparty democracy never appeared in any of the Chinese Ministry of Education designed textbooks, with uniformed distribution mandatory to all children born within its borders. The mass psychological incentivization through mandatory & public education system features the school violences designed to build uniformed nationalism traits via negative reinforcement. The positive reinforcements, not dissimilar to the monetary wars the CPC raised against KMT for power political gains, are concealed with the centralized banking system & data manipulations on metrics. [2] The civil-military fusion disrupts the purchasing power parity of the civil economy that underlies the basis for the Trade War. However, on a political dimension in international relations, Washington's instructions to Wedemeyer did not involve consideration for a democratic China, but only a centralized government. The use of control theory in Washington's overseas operations acknowledged the Chinese sovereignty, expressed the value tendency for the Nationalists (KMT), and nonintervention in case of two-party civil war. With unanimous attitude of diplomatic personnel, the KMT-CPC rapprochement was more of a humanitarian operation that may not have satisfied the communists.

2.4.3 The Extension of Russian Hegemony

Maritime competition is a key theme in the book. Stripped away the heteronormative accounts on the philosophy of history, the Big Bang lens of values in the drafting of history is not undesirable. [17] The strategization of Ostpolitik with the Comintern arcing from France to Beijing laid the foundation of the unitary party system in P. R. China. [18] Stalin's lure to the power ambitions of Mao Zedong contributed to the CCP's decision in fighting against America in the Korean War. The glorification of the Maoist dictatorship was combined with the domestic eugenic policies for future military personnel, which was later changed to birth limitations in the 1980s for food shortage. The contrast between the Nationalists and Communists in civil war attitudes is subtly portrayed, but nonetheless did not change the Communist's continuing deployment of nuclear arsenals across the Taiwan Strait. The continued extensions on the natural resources in the South China Sea and the nuclear submarines are leveraged against NATO in the security council, a seat the USSR bargained for the Com-

munists. Unlike the forces allied for scientific plausibility and positive-sum cooperations, the global communist movement's command chains have been a product of interpersonal satellite communications on a hierarchical basis. [19] If the Communists' beliefs in a materialistic world were true, such defeatist topdown commands only leads to the deductive world of materials, hence the exploitation of global energy resources. [18]

The alliances in the Asia-Pacific strategically block NATO's potential routs to the Southern Hemisphere, and manifested the authoritarian rises in the regional governments. The second-hand nuclear knowledge did not come cheap for the Communists nor the civilians under the regime, and the Chinese literati's narcissistic slogan of "unification" and "saving the country" with deficit machoism drove the dictatorial developmental path of modern China - if by saving it meant killing, if by saving it meant enslaving. The denial dialectics is still a formal political discourse in the Chinese politics and widely used in the state-controlled media. The students never realized by "national reunification" they meant to train them as defeatists to the people they may have thought to befriend with, and the book ended without further cruelties to the readers.

2.4.4 Cultural Errors in Revisionism

The book review adopted a critical theory approach. It has a diagnostic review on the Roman Statute's positivist approach to the Geneva Conventions. The qualitative method uses an axiological analysis in the cross-cultural intersection. Comparative cultural psychology was adopted on Chinese naturalism. [20] It analyzed the Chinese philosophies with the psychosocial note on the lack of negative infinity in the cultural-philosophical psychologies of the cultural nationalism in the CPC's revisionist approaches. The "yin" and "yang" approaches in the Chinese philosophies, denoting the gender binary of male and female and thought to complete the gender binary in Chinese heteronormativity, is identified as the structural stigma in the ethnical & regional context. [21] [22] The deficiency of negative infinity in the Chinese philosophies is regarded to be the driven psychodynamic factor in the human behaviors of the enforced cultural indigenous population, apart from the dangers of the revisionism approach without negative infinities taken into the consciousness of the regime population. The postpositivist element of the book review was aimed at counteracting the intrusive amplification effect on the use of mass media and modern cyberspace by the militarization of the UFWG. [21] With the axiological constructs of the book reviews & research process, my previous discourse approach with *ménage à trois* became a personal marriage choice *in leu of* law from origin, and became the intrinsic factor on the preservation of personal psychology in the research process. [23] [24]

3 RESULTS

The research mainly aimed at scaling the impact of the fraudulent "military-civil fusion strategy". With the deceitful terms of "new energy" and "clean energy", the high metallicity production of nuclear weaponry in the Yantze river region with

humid air environment significantly undermined the public health system's capacity and harmed the public health. [2] Moreover, recent developments of chip production in Chongqing for the purpose of illicit surveillance technologies disguised in market products will further increase actinic radiation's interactions with the lingering metallicity in the humid air. Such pollution will further impact on the riverbeds & farmlands in the region.

Quantifying the hydrothermal circulation on the consumption of the earth's internal heat budget can capitalize the economic factors to the ecological paradigm of climate change in order to deter the self-destructive behaviors of the dictatorial & militant approach of the Chinese nation. With the continued energy politics led by Russian hegemonic banking in the South China Sea, the Chinese government & CPC's delusional power projection over Taiwan in the approach can further harm the population in the region by top-down command economy. With the exacerbated nuclear weaponry production, current methods of indicator in the energy sector on carbon footprint's weakness in addressing the thermal factor in environmental change unveils that, the drastic & mass production of nuclear weaponry in the production of high concentration of carbon families or derivative compounds has created irreversible changes to the planetary system destroying atmospheric plasma and resonance causalities on natural fusion and fission generations. [25] Whereby the cooling facilities of nuclear power plants contribute to the surface warmth of the hydrothermal circulation, hydroelectric power plant changes the phases of the circulation.

4 CONCLUSIONS

Annexation is often said in a cultural territorial context in many dictatorial regimes and with communist spread. [3] However, with the scientific instruments on the development of outer space, and the low earth orbit satellites that governs most commercial activities, the seizure of assets and production-based ideologies is widening the knowledge gaps between the democratic and dictatorial regimes, especially with territorial totalitarian approaches of government. [26] In a political-economic aspect, this undermines the presumptions of global economy as one; and in critical international relations, the equitability of deductive welfare from the scientific instruments is undermined by the widening ontological gaps between the Communist blocks and democratic sovereignties. [27] [10] [28] The inevitable overlaps in the semantics realm with the individually targetable mass surveillance have put privacy as the price for the democratic societies as a collateral damage for economic engagements, if not also emboldened the dictatorial gross breaches in the market economies. [2] By the differences of orbits and developments in outer space activities, the strategic goals of the communist block will only increase territorial marginalization effects with high frequency trading and monetary flows in contrast to the outward-bound scientific goals of the American led outer space developments. [3] Such widening of cosmic gaps will further increase the consciousness gaps between the communist regimes and the democratic states, creating further fragmentations both in the basis of the natural sciences and in the sociopolitical under-

standings.

The command chains of the low earth orbits consisted of the spread of Russian hegemony in competition with NATO, and the nuclear knowledge to the geopolitical territorial powers of the communist blocks. Such complexities of the orbital signals hence become of the limitations to the fundamental freedoms that the human rights clauses pertain to. [29] Surrogacy of language rhetoric and semantic issues among domains becomes of the new form of nationalism in modern Chinese autocratic socialism. It is in this regard, the issues of dictatorial regime's ideological spread in the cyber spaces and commercialized sectors, containing psychological data used in media with power interdependence, shape the problems on privacy and commercial ethics in the cyber domains. [2] [30] The politics of registrars in dictatorial powers further enhance the enslavement of people with more effective backend data and less visible means of suppression in modern society, such as the monopolization of universities by the Ministry of Education of P. R. China with a centralized registrar. [31]

The development of informatics and Great Firewalls is only the part of it that counteracts the democratic countries' Evangelical commercial activities, and the seizures of data centers to the controls of the regime power further enhanced the communists' targeting capabilities on the civil society with the party prerogatives of military civil fusion, with telephone tapping and ethical issues in metadata included. [2] Mass surveillance and targeted surveillance is often associated with the totalitarian and dictatorial needs to put potential talents under control and use by the powers. It is not only a crime against humanity, but also a malpractice in the scientific and academic fields that contribute to unethical technologies. [31] As was evidenced, in the spirit of the peaceful development of outer space, high energy beams and LASERS can have more perilous consequences to humanity than the existing explicitly prohibited antisatellite weapons. [31]

Federated policies use a geographical ground-based thinking in fostering collective actions, but the causal chain of environmental change is less accounted for, nor the human activities' influences to the cosmos. [31] Such issues are not only contributed by the existing low-earth-orbit satellite signals, but also outer-space-bound high energy beams' lasting transmission to local universes. [32] The magnitude of the influence is large with the galactic sized black holes, yet is not well defined in *ad hoc* senses. Unlike the nuclear power sources used in outer space that decay naturally with limited travel speed, such high energy beams travel in the speed of light in concentrated forms. [2] The asymmetry of information on such magnitude of changes in the cosmic environment further makes it unpredictable if any such energetic beams traveled to a local black hole. By the *ex aequo et bono* spirit, I have already sent the peer-reviewed papers to the International Court of Justice without any party affiliation. With the P5 member status, China would never have been possible to consent to arbitration and this also underlies the prosecution of Christians and militarization of religion by the Chinese Communist Party in order to contract the fundamental values set forth in the Roman Statute. The cultural nationalism, cyber psychology warfare, and mass surveillances by the dictatorial power is a gross

waste of natural & human resources in evading justice. Since no other rational parties with military powers may want to file against the nuclear power, I constitute my own party by *forum prorogatum* on such a case in an *ipso facto* basis as an asylum accepted by the U.S.A. [31]

With information asymmetry, P. R. China's import and export, hence currency manipulation regime, have been an underlying factor to the production and administration support for malicious technologies. Its suppression on the freedom of publication further justifies its guilt and evil systemic cover-up attempts disregarding international justice and global peace of the fundamental survivals of humanity. With the United Nations Office for Outer Space Affairs, an expert group on the issues ought to be formed for the formation of state consents so that justice can be seen to light with proper scientific evidences. The Roman Statute as a successor to the Geneva Conventions is the best covenant that current there is.

5 DISCUSSIONS

As the paper has identified, six foreseeable impacts on the current conducts of P. R. China are listed as: 1. Undermining of human security; 2. Erosion to mental & psychological health; 3. Development of coercions in democratic societies using population surrogacy; 4. Further access to intellectual properties & sensitive technologies; 5. Artificial intelligence calculations & designs for population controls that are explicitly drafted into criminal acts by the Roman Statute; 6. Market access to military technologies and further militarization on technologies. As for the structural designs and instrumentalization of government is a dictatorial conduct, my persecutions and accusations have been on the current dictator Xi Jinping. [2] However, the Bush administration's withdrawal along with Russia from the signatories of the International Criminal Court (ICC) further delegitimized the Roman Statute. Strategically, Taiwan & India's status in the ICC can contribute to a better global society based on democratic principles, yet the Christian faith for decolonial discourse powers have been a cross-cultural misunderstanding in shaping the wills, with LGBTQIA+ issues as one of them. [33] The "believing and desiring" in the Outer Space Treaties did not take into consideration on gender & sexuality diversity, and what it means to the ethics of such families is open to discussions.

Analogous to the Vitruvian Man, human rights put the person at the centerfold or lens in globalization. Modern structures confine power to a single institution in the United Nations system, namely the reach of force(s) in geographic locations in the General Assembly & Security Council. [10] The structural realist power competitors, often than not, in seeking & maintaining regional power of force, use culture as a totalitarian pretense for repelling international law with offensive realism. [35] The territorial monetary generation schemes in communism with forced "jurisdiction" has been a persistent practice and now with natural resources satellites for further negative sum game practices. Albeit the hegemonic ambitions' fear has been reflected on the ongoing aggressions on Ukraine, scientific consensus buildings are still necessary. [36]

Even with U.S.'s interventions, the realpolitik precedence of the Stalin dictator's evasion of justice set the perception on

victor's justice in the trial. [37] Whereby organizational crimes are ideally to be taken accounted for with the commanding source of such organization(s), the Eichmann's case is just on the basis that even under extreme coercion, holocaust is not justified in order to preserve one's own life and / or well-being. However, such historic facts take root in the memories and perceptions of the public, and cause further fears being fed on by the instrumental powers' organizational coercions. [38] [39] The less obvious yet more profound harms on the global public interest of biological security are not unassociated with the exacerbated developments, with severe breaches on humanitarian laws. [31] [40] Such preemptive measures are characteristic on fending the state system off totalitarian politics and militant coercions in the disguise of "guided democracy" that is fundamentally no democracy, especially that the breaches of humanitarian laws negate the presumption of multiculturalism, which should be seen as sophisticated discourse for the dictatorial surrogacy. [41] [42] Such cultural psychology utilizes art history to the perceptions of might for malign mergers and acquisitions as economic coercion bargaining in the global market, which is especially worse within the power's territory. Human trafficking is largely a result of administrative detention and especially for the case(s) of the "Great Firewall" of mainland China. [43]

It is also for the concept of justice in the discussions, I would suggest that the International Court of Justice shall have a specialized gender group on the fundamental freedoms and human rights for LGBTIQIA+ persons, which by population rates of birth in humanity may always be a minority group. [34] However, with the predatory economic & financial practices combined with gross human rights abuses, the regions under communist & Russian hegemonic seizures are still an expanding humanitarian crisis. Even though a state party to the Geneva Convention on the Prevention and Punishment of the Crime of Genocide, the coerced birth control & measurement is still a nationwide practice in the Chinese communist regime, with numeral instances of genocide acts not punished; the ongoing detention camp in Xinjiang is not unlikely to have the element of forcefully transferring children of the group to another group. With the springing-up of globally distributed communist revolutions, how can the liberal institutions regain its strengths in legitimacy in liberal internationalism?

ACKNOWLEDGMENT

The author wishes to thank the former Trump administration for spreading brutal truths on the regional issues, albeit it only worsened the power grip of the dictatorial forces.
